Professional Summary

Experienced Unity Game Developer with 6+ years of hands-on experience building gameplay systems, tools, and interactive features in C#. Combines strong programming fundamentals with practical commercial experience across both game development and software engineering environments. Graduated with a BSc in Computer Science (Games Technology) from Nottingham Trent University.

Previously worked at Glyde Games, where I contributed to the full development cycle of Paddle Together, gaining valuable experience in taking a game from early production through to Steam release. This provided direct exposure to real-world game development pipelines, iteration, optimization, cross-discipline collaboration, and shipping processes.

In addition to studio experience, I am currently developing my own game project as a solo developer, handling gameplay programming, systems design, technical problem-solving, and overall project direction independently.

Strong in gameplay programming, debugging, optimization, tool development, and writing clean, maintainable code. Comfortable collaborating with designers and artists while also taking ownership of systems from concept to implementation.

Core Technical Skills

Languages: Python, JavaScript (React), C#, SQL, C++

Game Development: Unity, gameplay programming, tool development, systems architecture, debugging, optimization

Frameworks & Tools: Git, REST APIs, React, Node.js (familiar), Flask (familiar), Visual Studio Code

Concepts: Object-Oriented Programming (OOP), Software Design Patterns, Scalable System Design, Agile Development, Code Reviews

Other: Cross-disciplinary collaboration, problem-solving, rapid prototyping, solo development

Education

BSc (Hons) Computer Science (Games Technology)

Nottingham Trent University | Sept 2021 – Sept 2023

Modules: Games Programming (High 1st), Software Development, AI Fundamentals, Applied Mathematics

Professional Experience

Unity Game Developer – Glyde Games

Jul 2025 – Nov 2025 | Full-time

- Contributed to the development of Paddle Together, a commercially released game on Steam.
- Worked on gameplay systems, in-editor tools, and technical features using C# and Unity.
- Supported the project through the full development lifecycle, from active production to final release.
- Improved existing systems for maintainability, stability, and scalability.
- Collaborated closely with designers and artists to turn gameplay requirements into practical technical solutions.
- Worked on debugging, optimization, and feature implementation in a production environment

Software Developer – Arkman Software

Apr 2024 – Jul 2025 | Full-time

- Designed and maintained .NET Core back-end systems and SQL Server databases.
- Improved API performance and reliability through optimized code and query design.
- Collaborated with QA and design teams to deliver stable, tested software releases.
- Gained exposure to CI/CD pipelines and cloud deployment fundamentals.

Languages

English: Professional working proficiency

Turkish: Native proficiency

Personal Interests

Game systems design, solo game development, creative technical problem-solving, camping, board games and dnd.
